The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of the human genome, useful in an assay for screening and identifying of one or more novel peptides which are drug candidates or pro-drugs -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                 The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for screening and identifying of drug candidates or pro-drugs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides
                                                                                                    Sequence
                                                                                                                                    Saccharomyces
                                                                                                                                                                                                                                                                                        Example 3; Page 40; 488pp; English.

                                                                                                                                                                                                                                                                               The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from

The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from
                                                                                                                                                                                                                                       Saccharomyces cerevisiae

                                                                                                                    The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from

                                                                                                                                                                                                                                                                                                                              The invention relates to the identification of complementary paptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from

In particular it is used to tuse domain mimicking Vh and Vl from monoclonal antibody, to produce single chain binding site proteins (sFV) which dissolve in physiological media, retain their activity at high concentrations, and resist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAR27243 is a prefd. linker of the invention. The advantage of such linkers is that they can improve the refolding properties of the fusion protein expressed in procaryotes. The linker itself is resistant to proteolysis. In particular it is used to fuse domains resistant to proteolysis.

These peptides may be used to competitively inhibit the binding of huTF to blood coagulation factor VII/VIIa, pref. without forming an activated complex, ie. without initiating coagulation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 5; 152pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inhibiting coagulation during extracorporeal circulation - by admin of monoclonal antibody preventing binding of tissue factor to coagulation factor 7 or 7a
A method has been developed for inhibiting tissue factor (TF) mediated cerebral reperfusion tissue damage in a subject with cerebral ischaem (or one in which blood flow to the cerebral vesets has been occluded during a surgical procedure) by the administration of monoclonal antibodies similar to those produced by the cell lines ATCC HB9381, HB9382 and/or HB9383 to inhibit blood coagulation reactions initiated
                                                                                                                                                                                                                                                                                                                                             US5879677-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW98953 standard;

A method has been developed for inhibiting tissue factor (TF) mediated cerebral reperfusion tissue damage in a subject with cerebral ischaemia (or one in which blood flow to the cerebral vessels has been occluded during a surgical procedure) by the administration of monoclonal antibodies similar to those produced by the cell lines ATCC HB9381, HB9382 and/or HB9383 to inhibit blood coagulation reactions initiated be the binding of TF to a Factor VII/VIIa complex. The method can be used to prevent damage caused by the reperfusion of blood into tissues following, for example, a stroke, myocardial infarction or a surgical procedure that resulted in the occlusion of blood flow to the tissue. Reperfusion damage may be a result of TF mediated fibrin formation (i.e the beginning of the clot formation reaction), which contributes to the no-reflow phenomenon by producing smaller secondary clots in capillarie
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the binding of TF to a Factor VII/VIIa complex. The method can be used to prevent damage caused by the reperfusion of blood into tissues following, for example, a stroke, myocardial infarction or a surgical procedure that resulted in the occlusion of blood flow to the tissue. Reperfusion damage may be a result of TF mediated fibrin formation (i.e. the beginning of the clot formation reaction), which contributes to the no-reflow phenomenon by producing smaller secondary clots in capillaries downstream from the original obstruction in response to vascular damage. Treatment with the antibody prevents these clots from forming. AAW98951 to AAW98968 represent human TF binding site peptide analogues.
                                                                                                                                                                                                                                                                                     Inhibiting tissue factor mediated reperfusion tissue damage following cerebral ischaemia or myocardial infarction - by the administration of tissue factor specific monoclonal antibodies to inhibit binding of the tissue factor to the Factor VII/VIIA complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09-DEC-1992;

                                                                                                               during a surgical procedure) by the administration of monoclonal antibodies similar to those produced by the cell lines ATCC HB9381, HB9382 and/or HB9383 to inhibit blood coagulation reactions initiated by the binding of TF to a Factor VII/VIIa complex. The method can be used to prevent damage caused by the reperfusion of blood into tissues following, for example, a stroke, myocardial infarction or a surgical procedure that resulted in the occlusion of blood flow to the tissue. Reperfusion damage may be a result of TF mediated fibrin formation (i.e. Reperfusion damage may be a result of TF mediated fibrin formation to the beginning of the clot formation reaction), which contributes to the no-reflow phenomenon by producing smaller secondary clots in capillaries downstream from the original obstruction in response to vascular damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        downstream from the original obstruction in response to vascular damage. Treatment with the antibody prevents these clots from forming. AAM98951 to AAM98968 represent human TF binding site peptide analogues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Inhibiting tissue factor mediated reperfusion tissue damage following cerebral ischaemia or myocardial infarction - by the administration of tissue factor specific monoclonal antibodies to inhibit binding of the tissue factor to the Factor VII/VIIA complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              09-DEC-1992;

The invention is used for inhibiting TF mediated reperfusion tissue damage in mammal, e.g. human. The TF inhibitor blocks the formation of the TF:factor VII/VIIa complex thus inhibiting the initiation of the coagulation cascade. The present sequence is human TF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of tissue factor inhibitor to inhibit tissue reperfusion tissue damage in mammal, e.g. human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAE16526 standard; peptide; 13

The invention is used for inhibiting TF mediated reperfusion tissue damage in mammal, e.g. human. The TF inhibitor blocks the formation of the TF factor VII/VIIa complex thus inhibiting the initiation of the coagulation cascade. The present sequence is human TF

The invention relates to a method for diagnosis of a disease or susceptibility to a disease associated with abnormal cell-cell adhesion between epithelial cells, comprising detecting a mutation in a nucleic acid encoding an adhesion protein, a protease or a protease inhibitor, modulated level of adhesion protein, protease or protease inhibitor, or its fragment polypeptide. The method is useful for diagnosing a disease
                                                                                                                                                                                                                                                                   Diagnosing a disease or susceptibility to a disease associated with abnormal cell-cell adhesion between epithelial cells, by detecting mutation in nucleic acid encoding adhesion protein, protease or protease inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    basal cell carcinoma; cutaneous lymphoma; skin cancer; lung malignancy; gastrointestinal tract malignancy; acne vulgaris; psoriasis vulgaris; antipsoriatic; dermatological; antinflammatory; antiallergic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Crohn's disease; ulcerative colitis; coeliac disease; peptic ulceration; impetigo; meningitis; skin melanoma; squamous cell carcinoma; psoriasis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          stratum corneum chymotryptic enzyme; envoplakin; desmoplakin; pig; SCCE desmocollin 1; adhesion protein; protease; protease inhibitor; eczema; contact dermatitis; lung atopic asthma; post viral asthma; viral warts; bronchial hyper-reactivity; chronic obstructive pulmonary disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a peptide fragment Hu#154-167 corresponding to residues 154-167 of human tissue factor (TP). The peptide sequence contains a putative Factor X binding site. The peptide is an inhibitor of TF-dependent coagulation in humans, specifically the binding of TF-factor VIIa to factor X. It is useful for treating or preventing blood clotting disorders or associated

This sequence represents a peptide used in the scope of the invention.
               c-erbB-2 refers to a protein antigen expressed on the surface of tumour cells. such as breast and ovarian tumour cells, which is an approx. 200,000 mol. wt. acidic glycoprotein having an isolelectric pt. of about 5.3 (see AAQ46083, AAR39568). A single chain Fv (sFv) is a covalently linked VH-VL heterodimer which is expressed from a gene fusion including VH- and VL- encoding genes connected by a peptide-encoding linker. Such linker sequences are set forth in AA residues 116-135 in AAR39569, which includes part of the 16 AA linker sequences in AAR39572. Using AAQ46084 for the 520C9 monoclonal antibody, a single chain polypeptide can be produced having a binding affinity for a c-erbB-2 related antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Single chain biosynthetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5
                                       The invention relates to a vaccine for alleviating or preventing cautoimmune disorders induced by infection with Epstein-Barr virus (EBV). CI tomprises EBV or a component in a carrier for administration of the virus or viral component to alleviate or prevent the autoimmune disorder. Also claimed are: (1) a diagnostic test kit comprising: (a) reagents control samples from individuals not at risk of developing an autoimmune disorder control samples from individuals not at risk of developing an autoimmune disease; and (c) a device for determining the differences in levels of a developing an autoimmune disease from those at lower risk of developing an autoimmune disease; and (2) a method for screening for genetic markers or risk factors for development of autoimmune disorders induced by comprising comparing the responses of different strains of the same species of an animal vaccinated with EBV or a component to induce an autoimmune response in at least one of the strains of identify potential genetic markers or risk factors. The methods can be cused for the prevention, diagnosis, and treatment of autoimmune diseases having EBV as an etiological agent. The autoimmune diseases may be e.g. systemile onset diabetes mellitus, Wegener's syrantiomatosis, etc.

The present sequence represents a peptide derived from Epstein-Barr or virus. Reagents are used to detect antibodies to this peptide in a control control disease to the diagnostic rest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Use of Epstein-Barr virus or component(s) - for developing product(s) which can be used for preventing, diagnosing, t determining risk of developing autoimmune disease

                                                                                                                                   The present sequence represents a peptide used in an example of the present invention. The present invention describes an antiviral agent capable of combatting herpes virus replication. The antiviral agent is capable of disrupting herpes virus replication. The antiviral agent is capable of disrupting the association between ULB and POL (UL30), where ULB and POL are respectively defined as ULB and POL of herpes simplex virus type 1 (HSV-1) together with homologues in other herpes viruses. The present invention also describes an assay to determine the ability of a test substance to interfere with the association of ULB and POL. The assay comprises: (a) exposing a lst viral component to a test substance followed by a 2nd viral component, or exposing a 1st viral component to a 2nd viral component followed by a test substance; (b) washing to cremove any 2nd viral component and/or test substance, and optionally determining the amount, of 2nd viral component associated with the 1st viral component. The antiviral agent can be used to combat herpes virus

                                                                                                                                                                                                                                                                                                                                         The present invention describes a monoclonal antibody (MAb) (I) that binds to a human breast cancer antigen that is also bound by MAb 454Cl1 and 520C9 (produced hybridoma ATCC HB8484 and HB8696, respectively). All described is a hybridoma that produces (I). (I) is useful in specific binding assays, affinity purification, drug or toxin targeting, imaging, and genetic or immunological therapeutics for various cancers. The present sequence represents a linker amino acid sequence which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ring

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a conjugate comprising a molecule that exerts a biocidal or cytotoxic effect on target cells in lesions of pathological angiogenesis and an antibody (L19) directed against an extracellular matrix component (the ED-B domain of fibronectin) which is present in the lesions. Examples of biocidal or cytotoxic molecules include fibronectin-2 (II-2), doxorubicin, interleukin-12 (II-12), Interferon-gamma (IFN-gamma), Tumour Necrosis Factor alpha (TNF alpha) tissue factor protein. These proteins may interact with a membrane-bound receptor on the target cell or perturb the electrochemical potential of the cell membrane. The treatable disorders include tumours, rheumatoid arthritis, diabetic retinopathy, age related muscular degeneration and angiomas. This sequence represents an amino acid linker encoded by a PCR primer used in the construction of an L19-IL-2 fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Zardi L,

autoimmune disease; infections and degenerative disorders), also for modifying differentiation and growth of cells; (ii) for elucidating the functional significance of individual stages in signal transduction; (iii) for introducing ligands into cells; (iv) as diagnostic reagents; and (v) for inducing immunological tolerance. (A) act specifically on a particular cellular target, can be delivered to specific cells and are toxicologically acceptable. They are universally specificable, by appropriate selection of their modular components. This sequence represents a peptide linker fragment used in the construction of a fusic construct composed of a fragment of the human STAT3 protein and CD4. an intracellular signalling cascade within the target cell. The products of the invention have cytostatic, antiinflammatory, nootropic, neuroprotective and immunosuppressive activity. (A) are useful, in human or veterinary medicine: (i) for treating diseases associated with abnormal physiological function and proliferation of specific cell types or populations (cancer; local or systemic inflammation; cellular storage diseases, e.g. amyloidosis, hemochromatosis or Alheimer's diseases; This invention describes a novel active agent conjugate (A) which comprises at least one each of: (i) a ligand (I); and (ii) a targeting domain (II) that binds specifically to a surface structure on a target cell in a non-human mammal, where the new feature is that (I) modulates in the construction of a fusion uman STAT3 protein and CD4.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a chimeric polypeptide (I) comprising an antigenic peptide capable of binding a human major histocompatibility complex (MHC) class I, a functional human beta-2 microglobulin and a functional human MHC class I heavy chain. The chimeric polypeptide is useful in generating large quantities of pure single chain MHC class I polypeptides which can be used in monomeric or multimeric form to. present antigenic peptides to cytotoxic T-lymphocyte (CTL) clones. They may also be used in rapid, sensitive and reliable MHC peptide binding assay to identify high affinity MHC binding T cell epitopes, in in vitro primary CTL induction studies to define those peptides that are immunogenic, and to generate antibodies. This is the amino acid sequence of a linker peptide used in the creation of a chimeric polypeptide capable of binding human major histocompatibility complex (MHC) class
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New chimeric polypeptide useful for generating antibodies, comprisantigenic peptide that binds a human major histocompatibility comp(MHC) class I, a human beta-2 microglobulin and a human MHC class heavy chain -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              02-JAN-2003

(OKLA-) OKLAHOMA MEDICAL RES FOUND.

James JA, Kaufman KM

Novel vaccine for alleviating or preventing autoimmune disorders induced Epstein-Barr virus (EBV) infection e.g. systemic lupus erythematosus, juvenile onset diabetes mellitus, comprises EBV vits component EBV virus

Example 9; Page 52; 114pp; English

CC inflammatory bowel disease, polymyositis, deermatomyositis, multiple CC endocrine failure, Schmidt's syndrome, autoimmune uveitis, Addison's CC disease, adrenalitis, primary billary cirrhosis, Graves' disease, CC disease, adrenalitis, primary billary cirrhosis, Graves' disease, CC thyroiditis, Hashimoto's thyroiditis, autoimmune thyroid disease, CC pernicious and haemolytic anaemia, lupoid hepatitis, demyelinating CC disease, multiple sclerosis, subacute cutaneous lupus erythematosus, CC pernicious and haemolytic anaemia, lupoid hepatitis, demyelinating CC didopathic thrombocytopenic purpura, autoimmune pemphigus vulgaris, CC pemphigus, bullous pemphigoid, dermatitis herpetiformis, altoimmune cystitis, pemphigoid, scleroderna, progressive CC mellitus (Type IT diabetes), male or female autoimmune infertility, CC ankylosing spondylitis, ulcerative colitis, Crohn's disease, mixed CC connective tissue disease, polyarteritis nodosa, systemic necrotising CC vasculitis, glomerulonephritis, atopic dermatitis atopic rinnitis, CC asthma, recurrent abortion, anti-phospholipid syndrome, farmer's lung, CC antoimmune chronic active hepatitis, bird-fancier's lung, allergic calveman multiforme, postcardotomy syndrome, Cushing's syndrome, CC allergic alveolitis, fibrosing alveolitis, interstitial lung disease, corphalomyelitis, fibrosing alveolitis, interstitial lung disease, corphalomyelitis, postcarnal lysis, alopecia, Alport's syndrome, CC sampter's syndrome (triaditis, nassl polyps, eosinophilia) and Behcet's disease, Caplan's syndrome, enrophalomyositis, crythema elevatum et tradicum en order and service for a store content of contents of the conten autoimmune disorders induced by infection with Epstein-Barr virus (EBV) comprising EBV or its component in a carrier. The vaccine is useful for preventing or alleviating autoimmune disorders induced by EBV, e.g. systemic lupus erythematosus (SLE), Sjogren's syndrome, juvenile onset disbetes mellitus, rheumatoid arthritis, Wegener's granulomatosis, infiliates mellitus, rheumatoid arthritis, Wegener's granulomatosis, The present invention relates to a vaccine for alleviating or preventing

Example; Page 28; 124pp; English

suppressor gene, designated SSeCKS, that encodes a substrate of protein kinase C, and that functions as a mitogenic regulator and as a tumour suppressor. The invention also discloses a monoclonal antibody which specifically binds to an epitope of SSeCKS. The monoclonal antibody may be used to modulate the SSeCKS protein. The SSeCKS gene and protein are useful in diagnostic and therapeutic methods, particularly in regulating mitosis, suppressing tumours and treating cell proliferation disorders such as cancer. SSeCKS may be used as a marker for aberrations in fertility and/or nervous system development. The present sequence represents rat SSeCKS cyclin D binding (CY) domain mutated peptide which is linked to a penetratin peptide in the examples of the present invention. The present invention relates to the isolation of a novel rat tumour

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention provides an isolated, mutated Monoamine Oxidase B (MAO B) enzyme having at least one amino acid substitution for wild-type amino acids in a MAO B active site, the wild-type amino acid residues selected from Phe423, Glu427 and Thr428. A plasmid containing the DNA encoding the mutated MAO B and regulatory elements can be used for the recombinant expression of the enzyme. The mutated MAO B enzyme is useful for indirect regulation of cellular neurotransmitters and vasoamines, as the substitutions reduce MAO B's activity and alters its pH profile. The present sequence represents a Pseudomonas P-450terp peptide fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes erythropoietin analogue-human serum albumin (EPOa-hSA) fusion proteins having at least one amino acid residue of the EPOa moiety altered such that a site, which serves as a site for glycosylation in EPO does not serve same purpose in the EPOa. The present sequence represents a specifically claimed peptide linker for use in the construction of an EPOa-hSA fusion protein. The EPOa-hSA fusion protein can be used in treatment of a subject in need of EPO, e.g. for a patient suffering from anaemia associated with renal failure, chronic disease, HIV infection, blood loss or cancer. The EPOa-hSA fusion protein can be included in a nutraceutical, such as an infant feeding formula. The EPOa-hSA constructs can be used as part of a gene therapy protocol to delivery nucleic acids encoding an EPOa-hSA fusion

The sequences are useful for treating an individual suffering from, or at risk of, a disorder of the immune system e.g. inflammatory disorder or autoimmune disorder, including rheumatoid arthritis, asthma, sepsis, cirrhosis, dermatitis, psoriasis, contact hypersensitivity, inflammatory bowel disease, autoimmune encephalitis, multiple sclerosis, diabetes, lupus, uveitis and coeliac disease. The present sequence is a linker peptide described in the exemplification of

These are peptide analogues of the huTFh binding site. These peptides may be used to competitively inhibit the binding of huTF to blood coagulation factor VII/VIIa, pref. without forming an activated complex, ie. without initiating coagulation. Active huTFh has the capacity to induce factor VII/VIIa-dependant coagulation. Monoclonal antibodies (MAb) raised against these huTFh fragments, may be used to assay for huTFh, for in vivo thrombus detection and for treating cancers which express TF on the surface, eg. breast and lung carcinoma. These MAb may be used to eliminate the need for large doses of conventional anticoagulants such

The peptide sequence contains a putative Factor X binding site. The peptide is an inhibitor of TF-dependent coagulation in humans, specifically the binding of TF-factor VIIa to factor X. It is useful for treating or preventing blood clotting disorders or associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                        The present invention relates to tissue factor (TF) mediated reperfusion tissue damage in mammal, e.g. human is inhibited by administering to the mammal a TF inhibitor. The invention is used for inhibiting TF mediated reperfusion tissue damage in mammal, e.g. human. The TF inhibitor blocks the formation of the TF:factor VII/VIIa complex thus inhibiting the initiation of the coagulation cascade. The present sequence is human TF
                                                                                                                                                                                                                                                              Use of tissue factor inhibitor to inhibit tissue factor mediated reperfusion tissue damage in mammal, e.g. human -

                                                                                                                                                                                                        The sequence is an internal peptide from a new protein, designated CC CXX2, which is a component of bromelain. The protein has a molecular CC weight of 22.2 to 25.08 kD (as determined by SDS-PAGE) and an CC isoelectric point of 3.8-4.79. It is obtainable by: (a) dissolving CC bromelain in acetate buffer at pH 5; (b) separating the components of CC bromelain by fast flow high performance liquid chromatography on CC S-Sepharose (RTM), eluting with a linear gradient of 0 to 0.8M Nacl CC in acetate buffer over 300 ml; (c) collecting the fraction corresponding CC to the second sharp peak off the column, and (d) isolating the major CC protein from the fraction collected in (c) by anion chromatography and hydrophobic interaction chromatography.

CC CX2 is able to activate macrophages and natural killer cells and also CC increase interferon-gamma-mediated nitric oxide (NO) production. It is largely responsible for the anticancer activity of bromelain. It can be used for the treatment or prevention of solid cancers (such as covarian, colon, breast or lung cancer, or melanoma), non-solid tumours, CC leukaemia, or virus-induced tumours (such as hepatocellular carcinoma, CC Kaposi's sarcoma, T-cell leukemia or cervical carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         28-FEB-1997;
